SOP Awareness and Quality Assurance

AITS Learning Hub training manual and practice workbook

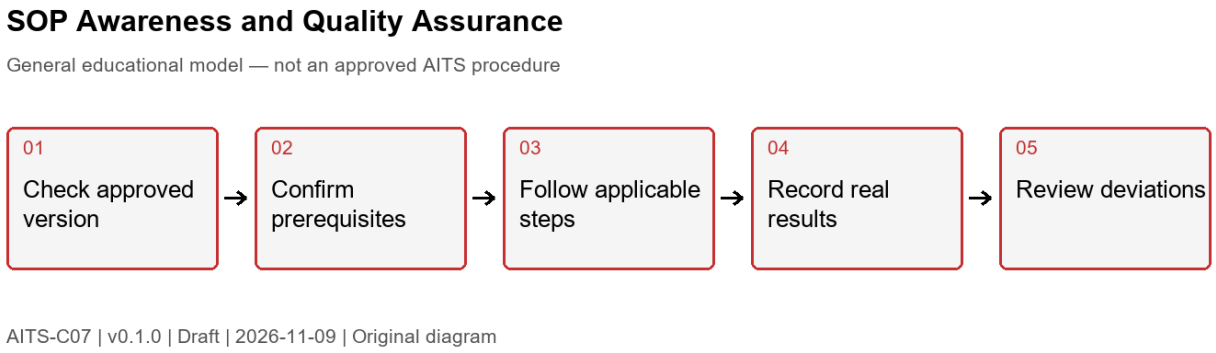

Sample Content — Pending Company Approval

This course introduces the concepts below and gives you exercises to practise them. Use the source notes to distinguish public company information, general guidance and fictional examples. It does not authorize live work or establish internal policy.

Document ID	AITS-C07-MANUAL
Version and status	0.1.0 / Draft
Created and updated	2026-11-09
Audience	All employees, Reviewers
Reviewer	Company to designate
Author	AI-assisted instructional draft
Classification	Mixed; see lesson references and example labels
Duration	About 100 minutes including exercises
Language	English; Thai summaries pending native-speaker review

Learning objectives

- Check scope authority and version before following instructions.
- Record actual results and disclose departures from the plan.
- Distinguish process prevention from checking a finished result.
- Use AI feedback as practice support with source and approval controls.

Read an SOP before using it

AITS-C07-L01 | 15 minutes | Draft

Objective: Check scope authority and version before following instructions.

Prerequisites: AITS-C01

A standard operating procedure describes a repeatable task, its scope, responsible roles, prerequisites, steps and required evidence. A useful SOP also identifies exceptions, stop conditions and related documents. Standardization reduces avoidable variation only when the procedure is appropriate and current.

Before use, check document ID, version, approval, effective date and applicability to the actual equipment and site. An attractive draft is not an approved procedure. If two versions conflict, pause the affected task and ask the authorized owner to identify the current version. The generic templates in this course are Draft and must not be used as official AITS instructions.

Worked example

A printed checklist v1 and a digital v2 disagree about a test. The exercise asks you to resolve document authority, not choose whichever is easier.

Try it

Mark the fields you would inspect on an SOP cover before starting work.

Your response: _____

Compare your reasoning

ID, version, approval, effective date, task/equipment scope, prerequisites and responsible owner.

Remember

Check scope before steps Check version and approval Resolve conflicts with the owner

Thai summary (AI translation, not professionally reviewed): ตรวจสอบขอบเขต เวอร์ชัน และการอนุมัติก่อนใช้ SOP แบบร่างในหลักสูตรยังไม่ใช่ขั้นตอนทางการของบริษัท

References: QA, EX. See source register.

Evidence and deviations

AITS-C07-L02 | 15 minutes | Draft

Objective: Record actual results and disclose departures from the plan.

Prerequisites: AITS-C07-L01

Evidence connects a requirement to an observed result. Record what was checked, the method, time, relevant identifier and result. “Done” alone is weak evidence when the next reviewer cannot tell which requirement was tested. Do not fabricate a photo, measurement or signature.

A deviation is a departure from the applicable requirement or planned process. Record the difference and its impact; seek authorized disposition instead of silently changing the procedure. Depending on the risk, the task may need to pause. Preserve the original evidence and record any correction with traceable history. A failed check can be useful information when it is reported honestly.

Worked example

The required playback test was not performed because access was unavailable. Record “not tested, access pending,” rather than a pass.

Try it

Rewrite “all OK” into a test record with an unresolved item.

Your response: _____

Compare your reasoning

Device C2 live view verified at 14:00 under the agreed scene. Playback not tested; authorized access pending. Review requested before acceptance.

Remember

Record method and observed result Not tested is not passed Keep deviations visible

Thai summary (AI translation, not professionally reviewed): บันทึกสิ่งที่ตรวจจริง วิธีตรวจ เวลา และผลงานที่ยังไม่ทดสอบต้องไม่บันทึกว่าผ่าน

References: QA, EX. See source register.

Quality assurance and completion review

AITS-C07-L03 | 15 minutes | Draft

Objective: Distinguish process prevention from checking a finished result.

Prerequisites: AITS-C07-L02

Quality assurance builds reliable methods, training and review into the work. Quality control checks outputs against defined requirements. Both are useful: a final inspection can detect a defect, while a better preparation process may prevent it. The ISO overview supports this general distinction; this course makes no claim that AITS holds a particular certification.

For a completion review, compare the approved scope with evidence and open issues. Confirm that required tests have results, exceptions have an authorized disposition and the handover is understandable. Record recurring problems for improvement without changing a controlled procedure on your own. A customer signature alone does not erase an unresolved safety or technical issue.

Worked example

Repeated wrong device quantities suggest a preparation and reconciliation problem, even if a final count catches each error.

Try it

Propose one preventive process check and one final output check for an installation kit.

Your response: _____

Compare your reasoning

Preventive: reconcile approved scope and picking list before dispatch. Output: verify actual kit quantities and condition against the list.

Remember

QA improves the process QC checks the output Close work against evidence and scope

Thai summary (AI translation, not professionally reviewed): QA ช่วยป้องกันปัญหาในกระบวนการ ส่วน QC ตรวจผลลัพธ์ ต้องปิดงานตามหลักฐานและขอบเขตที่ตกลง

References: QA, EX. See source register.

AI checks and human authority

AITS-C07-L04 | 15 minutes | Draft

Objective: Use AI feedback as practice support with source and approval controls.

Prerequisites: AITS-C07-L03

An AI can help compare a written report with a checklist, ask missing questions and explain a training example. It may still misunderstand images, omit context or produce an unsupported answer. It cannot verify hidden physical conditions from a photograph, grant approval or turn a draft SOP into company policy.

Before accepting AI feedback, inspect the cited source, version, approval and applicability. Keep company-authoritative retrieval restricted to approved company records. Draft and hypothetical items may support clearly labeled practice, but not a policy answer. Do not submit secrets or unnecessary personal data. An AI practice score is formative feedback; official competency assessment requires the company's approved human-led process.

Worked example

An AI says a camera installation passes from one photograph. Ask which requirements and evidence were checked; unresolved physical tests remain unresolved.

Try it

Write an AI response to "What is AITS's travel allowance?" when no approved policy is available.

Your response: _____

Compare your reasoning

I do not have verified AITS travel-allowance terms. Please ask HR or the responsible company department for the current approved policy.

Remember

AI feedback needs source checks Draft knowledge cannot establish policy Practice scores are not certification

Thai summary (AI translation, not professionally reviewed): คำแนะนำจาก AI ต้องตรวจสอบแหล่งอ้างอิง AI ไม่สามารถอนุมัติ SOP หรือรับรองความสามารถพนักงานได้

Practical scenarios

Conflicting versions

Synthetic classroom exercise; not an AITS procedure. Role: Technician trainee

A printed v1 and digital v2 disagree. The approval status of v2 is unclear.

Decide: What would you check first, and why? What requires confirmation or authorization? What would you record and hand over?

Appropriate: Ask the document owner to confirm the current applicable version.

Inappropriate: Assume v2 is approved because its number is higher.

Consequence: Authority checks prevent use of an uncontrolled revision.

Missing test evidence

Synthetic classroom exercise; not an AITS procedure. Role: Reviewer trainee

A completion report says all passed but playback was never tested. The operator confirms access was unavailable.

Decide: What would you check first, and why? What requires confirmation or authorization? What would you record and hand over?

Appropriate: Correct the record to not tested and request disposition.

Inappropriate: Keep the pass to avoid delay.

Consequence: Honest evidence allows a valid completion decision.

AI says pass

Synthetic classroom exercise; not an AITS procedure. Role: Supervisor trainee

An AI approves a site from one photo. No electrical, playback or scope evidence is supplied.

Decide: What would you check first, and why? What requires confirmation or authorization? What would you record and hand over?

Appropriate: Treat it as limited feedback and require applicable evidence.

Inappropriate: Issue competency certification from the score.

Consequence: Human review prevents unsupported acceptance.

Use the full scenario JSON for the four-criterion rubric. Score evidence, decision quality, authority/safety and handover from 0–2 each. 0 = absent or unsafe; 1 = partial; 2 = complete and supported. Scores are formative, not certification.

Knowledge check

1. Which document should govern an actual task?

A. The current approved applicable procedure | B. The newest unapproved draft | C. The shortest checklist

2. What should happen when two SOP versions conflict?

A. Choose randomly | B. Combine both silently | C. Seek owner clarification before the affected task

3. Are these generic templates official AITS SOPs?

A. Only after downloading | B. No | C. Yes

4. What should an unperformed test be recorded as?

A. Passed | B. Blank but assumed passed | C. Not tested with a reason

5. Which is useful evidence?

A. A stock photo | B. Identified test, method, time and result | C. Only “done”

6. Can a trainee silently waive an SOP step?

A. No | B. Yes if busy | C. Yes if AI agrees

Use the answer key after attempting the questions. Proposed practice pass mark: 80%. This is not an AITS competency rule.

Knowledge check continued

7. Which is a preventive process check?

A. Wait for a complaint | B. Reconcile the picking list before dispatch | C. Hide a missing item

8. Does a signature erase an unresolved technical defect?

A. No | B. Yes | C. Only if scanned

9. Does this course assert AITS ISO certification?

A. Yes | B. Only for trainees | C. No

10. Can an AI approve a draft company SOP?

A. No | B. Yes if confident | C. Yes after enough prompts

11. What should an AI do with missing internal policy?

A. Invent a likely rule | B. Use a competitor policy | C. State the gap and refer to the responsible department

12. An AI practice score is official employee competency certification.

A. True | B. False

Use the answer key after attempting the questions. Proposed practice pass mark: 80%. This is not an AITS competency rule.

Answer key and references

1. A — Approval and applicability matter as well as age.
2. C — A controlled resolution avoids incompatible instructions.
3. B — They require company review and approval.
4. C — The record must reflect what actually occurred.
5. B — Traceability lets another person assess the result.
6. A — Exceptions require the applicable authorized disposition.
7. B — Preparation checks can prevent downstream defects.
8. A — A signature does not change the observed condition.
9. C — Only general quality principles are taught.
10. A — Approval requires authorized company action.
11. C — Unverified policy must not be presented as fact.
12. B — Competency and authorization require separate approved processes.
